

A best-selling energy internet product for edge computing

AI Overview

Helin and ZEDEDATA are among the leading edge computing platforms optimized for energy-intensive and distributed industrial applications. Helin Edge Intelligence Platform Helin is a full edge intelligence platform designed for heavy industry and energy sectors, including renewable energy, maritime, and offshore operations. It enables real-time processing of data directly at the edge, reducing latency and network strain while optimizing energy usage. Helin supports containerized applications, allowing industrial assets like solar parks, vessels, or drilling rigs to run AI-driven analytics, vision systems, and power management locally. This platform is particularly effective for fuel efficiency, power generation optimization, and large-scale IoT deployments. ZEDEDATA Edge Management ZEDEDATA provides a cloud-native edge management and orchestration solution with an open-source edge operating system (EVE-OS) from the Linux Foundation. It allows enterprises to deploy and manage applications across distributed edge sites, ensuring energy-efficient operation and low-latency processing. ZEDEDATA's platform supports AI/ML workloads, containerized applications, and real-time monitoring, making it suitable for energy distribution, smart grids, and industrial IoT. Avassa Edge Platform Avassa focuses on reliable deployment and orchestration of edge applications across multiple sites. It provides cloud-like automation for on-site edge environments, ensuring consistent performance, security, and energy-efficient operation. This platform is ideal for utilities and energy providers managing distributed infrastructure, including EV charging networks and renewable energy assets. Energy Efficiency Considerations Edge computing devices are increasingly energy-hungry due to AI, ML, and multi-sensor processing. Platforms like Helin and ZEDEDATA address this by opti...
