

Bolivia SD-WAN device 200G

AI Overview

The Fortinet FortiGate 200G is a high-performance SD-WAN appliance offering 3 Gbps firewall throughput, 6 Gbps VPN throughput, and advanced security features suitable for enterprise deployments in Bolivia. Key Features and Performance

The FortiGate 200G is designed for organizations requiring robust security and high-speed connectivity. It delivers firewall throughput of 3 Gbps and VPN throughput of 6 Gbps, supporting up to 5,000 concurrent SSL VPN users. The device integrates SD-WAN capabilities, enabling intelligent traffic routing, application prioritization, and seamless connectivity across multiple links, including MPLS, broadband, and 4G/5G networks. Advanced security features include intrusion prevention, anti-malware, SSL inspection, DDoS protection, and Zero Trust Network Access (ZTNA), ensuring comprehensive protection for enterprise networks.

SD-WAN Capabilities

FortiGate 200G supports centralized SD-WAN management, allowing administrators to monitor and optimize traffic across branches, data centers, and cloud applications. The appliance can automatically select the best path based on performance, availability, and application requirements, improving application experience and operational efficiency. It also provides network segmentation, traffic encryption, and policy-based routing, which are critical for secure and resilient enterprise networks.

Deployment in Bolivia

In Bolivia, SD-WAN solutions can be sourced through local providers such as ENTEL S.A., which offers secure, centrally managed SD-WAN services with enhanced cloud application performance and operational cost reduction. Another option is DIMA Bolivia, which provides SD-WAN solutions that simplify network management, optimize connectivity, and ensure business continuity across multiple sites. These providers can assist with installation, configuration, and ongoing management of FortiGate 200G appliances.
