

Cable tray sloping side climbing

AI Overview

Cable trays on inclined or climbing slopes must be installed with proper support spacing, secure fittings, and slope-compatible design to ensure safety, structural integrity, and cable protection. Slope Considerations When installing cable trays on a slope or inclined side, the following principles apply:

- Support Spacing:** Support locations should follow manufacturer recommendations and standards such as NEMA VE-1 and VE-2. For most systems, supports are recommended at 1/4 span intervals to minimize deflection and stress, especially at splice points (Eaton B-Line series).
- Slope Angle:** While horizontal and vertical runs are standard, inclined runs should maintain a gentle slope where possible to prevent cable slippage or excessive tension. Steeper slopes may require additional restraints or cable ties to secure the cables.
- Fittings and Splice Plates:** Use vertical or adjustable splice plates designed for inclined runs to maintain structural integrity. Systems like Eaton's KwikRail allow splice plates to snap into position and be bolted securely, which is critical on slopes.
- Cable Securing and Safety:** Cable Restraints: On slopes, cables must be restrained to prevent movement due to gravity. Use cable ties, clamps, or banding rated for electrical installations, avoiding transport banding which is not suitable for permanent installation.
- Load Considerations:** Ensure the tray and supports can handle the combined weight of cables and any additional loads. Inclined trays may experience uneven load distribution, so verify mechanical strength and deflection limits.
- Access and Maintenance:** Maintain sufficient clearance for cable pulling and future maintenance. Avoid using the tray as a walkway or ladder, as this can damage cables and pose safety risks.
- Material and Environmental Factors:** Tray Material: Choose materials suitable for the environment. For indoor installations, painted or galvanized steel is common; for outdoor or corrosive environments, stainless steel or aluminum alloy may be required.
- Thermal Expansion:** Inclined trays may expand or contract differently...
