

Electrical Distribution Box Installation Factory Price

AI Overview

The cost to install an electrical distribution box typically ranges from \$450 to \$6,500, depending on box type, amperage, labor, and installation complexity.

Cost Breakdown

Residential Installations: Standard residential panel boxes usually cost \$150 to \$1,900 for parts and labor, with most projects falling between \$450 and \$1,500 depending on amperage, wiring gauge, and labor complexity. Larger upgrades, such as moving from a 100-amp to a 200-amp service or adding subpanels, can increase costs to \$1,500–\$6,500. Labor is a significant factor, with electricians charging \$40–\$100 per hour, and call-out fees ranging from \$75–\$125.

Commercial or Industrial Installations: Commercial or industrial distribution boxes are more expensive due to higher capacity, durability, and advanced features. Costs can range from \$2,500 to \$12,000+, especially for custom enclosures or outdoor/weatherproof units. Factors such as amperage rating, number of circuits, material quality, and compliance with electrical codes influence the final price.

Additional Cost Considerations: Permits and inspections may add to the total cost, particularly in urban areas. Outdoor-rated or weather-resistant boxes carry a premium compared to indoor units. Complex wiring or relocation of meters can increase labor costs significantly. Energy-efficient or smart panels with monitoring capabilities may have higher upfront costs but can reduce long-term operational expenses.

Summary: For a typical residential installation, expect \$450–\$1,500 for a standard panel, while larger upgrades or commercial installations can reach \$6,500 or more. Labor, permits, amperage, and installation complexity are the main drivers of cost, and professional installation ensures compliance with safety codes and reliable operation.
