

European-style power distribution box for data centers

Overview

European-style prefabricated substations are modular power distribution equipment. They utilize a modular enclosure design, consisting of three independent compartments: a high-voltage compartment, a transformer compartment, and a low-voltage compartment. By choosing European Power Distribution Units (PDUs) from Schleifenbauer, your data centre secures continuity, flexibility, and maximum supply certainty. Designed and manufactured in the Netherlands, our PDUs and Inline Meters offer a powerful alternative to American technology, free from the risks. For reliable power distribution – flexible in quantity, form factor, and connection type Intellinet PDUs (Power Distribution Units) and rack power strips provide a reliable solution for power distribution in network cabinets, server racks, and professional IT infrastructures. These compartments are bolted together and.
