

Fiber Channel Protection

Overview

The Fibre Channel protocol and a majority of Fibre Channel devices -- from HBAs to switches and storage devices, implement various security mechanisms ranging from access control via zoning, LUN Masking to physical segregation of storage and local area networks. The solutions create a storage network you can trust. The network just works, no matter how demands evolve. Fibre Channel delivers unmatched protection, performance. Fibre Channel (FC) is the premier transport for storage within and across datacenters, known for its reliability, resilience, and high-speed connectivity. The ongoing wave of new threats and vulnerabilities demands the highest levels of security to safeguard an. Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. Attackers with specialized tools can: Physically access unsecured junctions or cabinets.
