

How much does a 72-port fiber optic patch panel cost

AI Overview

The price of a 72-port fiber optic patch panel typically ranges from \$150 to \$600, depending on brand, type, and features.

Price Overview

Schneider Electric 72-Port LC Patch Panel (1U): Available from RS Components, pricing is generally in the \$300–\$500 range for standard single-mode LC panels with 1U rack height.

OptoSpan 72-Port High-Density Fiber Patch Panel (1U): Designed for 40G/100G networks with MTP-LC cassettes, pricing is quote-based, often \$400–\$600 depending on configuration and quantity.

Norden Easy Front Access 72-Port Panel: Offers professional engineering for easy installation and maintenance; prices are typically \$200–\$400 for standard models.

Generic or Bulk Panels (Alibaba/FiberCheap): Prices for 72-port panels can start as low as \$150–\$250 for basic single-mode or multimode panels, with higher-end models reaching \$500+ depending on features like front access, cable management, or high-density design.

Factors Affecting Price

Fiber Type: Single-mode panels are generally more expensive than multimode due to longer transmission capabilities.

Rack Unit Size: 1U panels are more compact and often slightly more expensive per port than 2U or 3U panels.

Front Access vs Rear Access: Panels with easy front access or integrated cable management trays may cost more.

Brand and Quality: Established brands like Schneider Electric or OptoSpan command higher prices due to reliability and warranty.

Quantity and Bulk Orders: Ordering multiple units can reduce per-unit cost, especially from suppliers offering volume discounts.

Recommendation

For a standard 72-port single-mode LC patch panel suitable for enterprise or data center use, expect to budget \$300–\$500 per unit. For high-density or specialized configurations (MTP-LC cassettes, 40G/100G support), prices may rise to \$600 or more, and a quote from the supplier is recommended.
