

How much does a meter of dual-core indoor optical fiber cable cost

AI Overview

The price of a two-core indoor optical fiber cable typically ranges from \$0.30 to \$1.50 per meter, depending on fiber type and specifications. Price Range and Factors For basic indoor applications using multi-mode fiber, the cost can be as low as \$0.30 per meter. For single-mode fiber or cables with additional protective layers, such as armored jackets or compliance with international standards (e.g., ITU-T G.652), prices can rise to \$1.20–\$1.50 per meter. Key factors influencing the cost include:

- Fiber Type:** Single-mode fibers are more expensive due to their ability to transmit data over longer distances with minimal signal loss, while multi-mode fibers are cheaper and suitable for shorter-range indoor networks.
- Cable Construction:** Indoor cables with extra protection, such as flame-retardant jackets or LSZH (Low Smoke Zero Halogen) materials, cost more but improve safety and durability.
- Certifications and Standards:** Cables meeting international standards are priced higher due to reliability and performance guarantees.
- Installation Environment:** Indoor cables are generally cheaper than outdoor or direct-burial cables, which require additional protective layers.
- Bulk Purchasing:** Ordering large quantities (e.g., 1,000 meters or more) can reduce the effective cost per meter by 20–30%.
- Practical Considerations:** When budgeting for a network installation, consider that pre-terminated or factory-terminated cables may cost more upfront but reduce labor costs for splicing and termination. Additionally, indoor cables are typically rated for riser or plenum spaces, which affects both price and compliance with building codes.

In summary, for a standard two-core indoor optical fiber cable, expect to pay \$0.30–\$1.50 per meter, with the exact price depending on fiber type, protective features, certifications, and order volume.
