

How much does a reel of fiber optic patch cord cost

AI Overview

Fiber optic patch cord reels typically cost between \$50 and \$300, depending on cable type, length, connectors, and reel material. Cost Factors The price of a fiber optic patch cord reel depends on several key factors:

- Cable Type:** Single-mode (9/125 μm) and multi-mode fibers (OM3, OM4, OM5) differ in cost, with single-mode generally being slightly more expensive due to higher precision requirements.
- Length:** Longer reels increase the total cost linearly, though bulk orders can reduce the unit price.
- Connectors:** LC, SC, MPO/MTP, and APC connectors affect pricing. MPO/MTP connectors require precise alignment and polishing, which adds to the cost.
- Reel Material:** Reels can be made of high-impact plastic or metal. Plastic reels are lighter and more portable, while metal reels offer higher durability, slightly increasing the price.
- Additional Features:** LSZH jackets, armored cables, ergonomic handles, and friction brakes for tension control can increase the cost.

Typical Price Ranges

- Small plastic reels (up to 50 meters): \$50–\$100
- Medium reels (50–200 meters, single-mode or multi-mode): \$100–\$200
- Large or heavy-duty reels (200+ meters, armored or metal construction): \$200–\$300 or more

Bulk and OEM Pricing

Ordering in bulk or through OEM suppliers can reduce the per-meter cost. Custom labeling or testing reports may add \$30–\$100 per order, but bulk purchases often offset these setup costs.

Summary

A fiber optic patch cord reel's cost varies widely based on fiber type, length, connectors, and reel construction. For most standard applications, expect to pay \$50–\$300 per reel, with higher-end reels offering enhanced durability, specialized connectors, or longer cable lengths. For large-scale deployments, bulk purchasing can significantly reduce costs while maintaining quality standards.
