

How to install Huawei fiber optic cable from a router

AI Overview

To connect a Huawei fiber optic cable to a router, you typically use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to your router's WAN port.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT):** Provided by your ISP, converts fiber signals to electrical signals compatible with your router.
- Fiber optic cable:** Usually single-mode with SC/APC or SC/UPC connectors.
- Router:** Ensure it supports fiber input via WAN or SFP ports.
- Ethernet cable:** Cat6a or higher recommended for optimal speeds.

Step 2: Connect Fiber to the ONT

Locate the fiber wall outlet where the ISP's fiber line enters your home. Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's designated fiber port. Power on the ONT and wait 2–5 minutes for the status lights to stabilize.

Step 3: Connect ONT to Router

Use an Ethernet cable to connect the ONT's LAN/Ethernet port to your router's WAN port. Power on the router and wait for the indicator lights to confirm a successful connection.

Step 4: Huawei-Specific Fiber Connector Handling

Use optical fiber connectors (purchased separately) and ensure proper assembly: slide the rubber ring, insert the fiber into the support, and secure the external connector shell. Follow the correct torque specifications (e.g., 2.5 N·m for the shell) to avoid damaging the fiber. Maintain minimum bending radii: dynamic $\geq 20D$, static $\geq 10D$, where D is the cable diameter. Bundle fibers neatly with binding tape every 1 meter and label cables for easy identification.

Step 5: Final Checks

Ensure the Ethernet cable does not exceed 100 meters. Verify that all connections are secure and that the router is configured correctly via its web interface (typically 192.168.0.1 or 192.168.1.1). Optionally, enable Quality of Service (QoS) for VoIP or video calls to prioritize traffic. By following these steps, you can s...
