

Indoor electrical distribution box protective materials

Overview

Pick the right material for your distribution box. This keeps your electrical system working. Electrical enclosures are protective housings used to safeguard electrical components such as breakers, switches, terminals, and controls. Since distribution boxes house critical electrical components, they must be designed to withstand various environmental. You can find distribution boxes made from various distribution box materials such as steel, aluminum, PVC, polycarbonate, high-density polyethylene, and thermoset plastics like SMC. For example, you may need flame retardant features. As industries advance toward heightened automation and stricter safety. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices.
