

Intelligent Integrated Power Module System

Overview

Our IPMs integrate high-performance MOSFETs, IGBTs, and SiC devices with next-generation gate driver ICs for precise switching control, as well as optimized thermo-mechanical designs for improved heat dissipation and mechanical robustness. CIPOS™ Intelligent Power Modules for high performance and high integration We provide a comprehensive portfolio of Intelligent Power Modules (IPMs) covering a wide range of semiconductor technologies, package types, and voltage/current ratings. The goal is to optimize performance and make. At its core, an Intelligent Power Module (IPM) is an advanced integrated unit that houses everything needed to drive and protect power switching devices. Instead of sourcing three or four different chips, an IPM provides a "black box" solution that requires only a PWM signal from your controller. Offering a large range of 3 Phase inverter modules covering power levels from 50 W to 10 kW.
