

Is gyftzy a multimode or single-mode optical cable

Overview

GYFTZY Outdoor Cable can accommodate both single-mode (SM) and multimode (MM) fibers, depending on the application requirements. GYFTZY cables are designed to operate efficiently in a wide range of temperatures, typically from -40°C to $+70^{\circ}\text{C}$, ensuring reliability. A fiber optic cable (frequently shortened to "fiber cable") is a specialized transmission medium crafted to carry data as light pulses through ultra-thin strands of glass or plastic known as optical fibers. Unlike copper cables, which depend on electrical signals, fiber leverages light to convey. There are two main types of fiber optic cables: single mode and multimode. While multi-mode means that fiber can transmit data in multiple modes. The primary distinction between single mode and multi-mode fiber optic cable is the fiber core diameter, wavelength & light source. Choosing between single mode and multimode fiber is a common decision when designing, deploying, or upgrading fiber optic networks.
