

## Large cables inside cable trays often generate significant heat

### Overview

Many modern buildings rely on cable trays to carry a lot of power and data lines. But with more and more cables and longer use, cables getting too hot is a big issue. That's why good cable tray ventilation and heat. Abstract—Cables in ventilated and ladder-type trays have been extensively studied and are rated according to ANSI/NEMA standards. However, for solid bottom trays, there is very. In the actual installation of cables, inclined cable laying within covered cable trays is a relatively common method. The NUREG series comprises (1) technical and administrative reports and books prepared by the staff (NUREG-XXXX) or agency contractors (NUREG/CR-XXXX), (2) proceedings of conferences (NUREG/CP-XXXX), (3) reports resulting from international agreements (NUREG/IA-XXXX), (4) brochures (NUREG/BR-XXXX). The cables in trays are typically installed in close groups or bundles, causing strong mutual heating effects.
