

Logical Structure of the Energy Internet

Overview

The Energy Internet architecture is constructed by six layers, shown in Fig. From top to bottom are Business Layer, Use Case Layer, Operation Layer, Communication Layer, Interface Layer and Appliance Layer. Its features, such as plug-and-play mechanism, real-time bidirectional flow of energy, information, and money can lead to significant benefits and innovation in electricity production and. Abstract: Energy Internet, a futuristic evolution of electricity system, is conceptualized as an energy sharing network. In order to manage efficiently the energy supply and demand in the power grid, energy routers are. LPWA is an Internet of Energy (IoE) structure that can provide a comprehensive stream of energy sector applications. The IoE with intelligent computing tools can dramatically enhance energy efficiency, improve and sustain renewable energy, and diminish energy contamination's ecological effects.
