

M-series fiber optic distribution frames

Overview

This product is designed to manage fiber connections and fiber splices with ease of maintenance for installers. It is suited for pole or wall application. Basic type, Outdoor (Pole, Wall) application, IP 65CommScope's next generation frame (NGF) product line has fiber frames designed with an emphasis on superior cable management and ease of use, including features such as ample trough space for cable and jumpers, easy access to connectors and storage for jumpers. It is applicable for optical fibre connecting point between the optical transmission network and equipment or between the access network and subscriber cable by cross connection or direct connection to. An Optical Distribution Frame (ODF) is the central hub for fiber splicing, termination, patching, and cable protection in modern optical networks. As data centers, enterprises, telecom operators, and smart-building infrastructures deploy increasingly dense fiber links, ODFs provide the structured. It is a device that splices, distributes, and splits optical fibers and provides protection and management of optical fibers. When fully loaded with EDGE 4U housings the optical distribution frame dual-frame model provides a total capacity of 5,760 LC Duplex or MTP ports / 11,520 LC Simplex ports while the single-frame.
