Description netLINK Series Fiber Media Converter is the conversion equipment of Ethernet optical-electronic signals between 10/100M UTP interface (TX) and 100M Fiber interface (F X). The traditional 10/100M Fast Ethernet can be extended to the distance of 120km through optical fiber link. It can achieve two different twisted-pair cable and optical fiber transmission medium of transformation, relay base - TX 10/100 and 100 base - FX two different network segments, can satisfy the long distance, high speed and high. The most common type of media converter is a device that functions as a transceiver; converting the electrical signal used in copper Unshielded Twisted Pair (UTP) network cabling into light waves used in fiber optic cabling. Fiber optic connectivity is necessary when the distance between two. This compact Fiber Media Converter transforms 100Base-T (Copper) media to 100Base-SX/LX (Fiber) media and vice versa. The 100Base-T RJ-45 port supports a full duplex connection at wire speed. Features: For long distance: 10/100/100M auto-adaptive Ethernet fiber optical transceiver, using the latest design, high-performance chips, high-quality optical transceiver module, stable function and excellent quality, adaptability, and common network equipment can normally connection.
