

Optical Module DCO

Overview

The Digital Coherent Optics (DCO) coherent module represents a significant step forward in optical communication technology. To truly grasp the significance of these technologies, this article will explore the nuanced distinctions. Coherent modules such as CFP2-DCO, QSFP-DD DCO, and OSFP-DCO typically include coherent optical receivers and digital signal processors (DSPs), possessing the flexibility to adapt to different optical network environments. They contribute actively to the construction of efficient and reliable. Cisco ® QSFP28 100G ZR extends 100GbE coherent links from QSFP28 ports reaching up to 80km over dark fiber and up to 300km over amplified Dense Wave Division Multiplexing (DWDM) links. Despite years of engineering design and optimization, the maximum data rate of the analog electrical connector for the module is still limited to 25Gbps. To achieve higher transmission rates, very large.
