

Optical Power Meter Attenuation Device

Overview

An optical attenuator is a device used to reduce the power of an optical signal in a controlled, repeatable way. In test setups, it's essential for emulating signal loss, balancing power levels across channels or paths, and protecting sensitive receivers or components. Keysight attenuators offer low insertion loss, low. The Tektronix TOP130 Optical LED Source is a small, rugged LED source designed for use in installing, maintaining and researching LAN, FDDI and other fiber optic links. This multimode instrument provides two calibrated outputs - at 850 nm and 1300 nm. Providing both CW and modulated outputs, the AFL is a trusted supplier of optical testing equipment with more than 30 years of experience and tens of thousands of units in use in the field. Its advanced power stabilization function lets you set and maintain the output power stability even when the input power fluctuates.
