

## Parameters of Belarusian tubular busbars

### Overview

Busbars can achieve lengths of approximately 140 meters when welded, facilitating extensive installations. To mount a bus bar to an assembly structure, hardware (studs, holes, etc. ) can be manufactured into the conductors. Using alloy 6101B T7, busbars can handle a current capacity of 3000A with dimensions of 100/10, 120/6, or 160/4. Mechanical and thermal loads dictate busbar design, ensuring operational. The purpose of this document is to detail the requirements of Northern Powergrid in relation to the tubular busbar systems and associated fittings detailed within this document. This document supersedes the following documents, all copies of which should be destroyed. It interconnects various components such as The choice of busbar material, dimensions, and configuration significantly impacts the substation's performance. Used in small substations. In electric power distribution, a busbar (also bus bar) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution, transmission, or switching substations.
