

# Reasons for home relay protection tripping

## Overview

It trips because it's doing its job to protect your home from electrical hazards like fires or damage to appliances, typically due to an overloaded circuit, faulty wiring, a short circuit, a ground fault, an appliance malfunction, or an electrical surge. An overload relay typically trips to protect a motor from excessive current that causes overheating. Troubleshooting involves checking the motor load, relay settings, power supply, environment, and the relay itself. These steps help you identify why the relay trips and how to stop it from happening. Nuisance tripping, also known as 'sympathetic tripping', is the unnecessary tripping of circuit breakers when a fault does not exist. This type of tripping is undesirable and detrimental to the power continuity. In simple terms, the relay trips unnecessarily, interrupting normal motor operation despite the system appearing to function within acceptable limits. Unlike. A circuit breaker is a small device in your electrical panel, fuse box, consumer unit or trip switch box that protects your electrical installation from overload, electrical faults and serious damage.
