

The function of the small busbar at the top of the screen cabinet

Overview

The busbar system is the central component of any switchgear cabinet. It acts as the main electrical pathway that distributes power from the incoming supply to multiple outgoing circuits. There are measurement PT and measurement PT in the PT cabinet (the original requirement is to separate the measurement PT and the measurement PT, if there is no special requirement, they can be. A busbar system is a modular system comprised of busbars, busbar terminals and supports for the safe, efficient distribution of electrical power in industrial and commercial facilities. Busbars are typically made from copper or aluminum due to their excellent electrical conductivity and. The invention relates to the technical field of operation and maintenance and reconstruction construction of power equipment, in particular to a connecting device for a small bus at the top of a protective screen cabinet of a transformer substation.
