

The incoming power line to the distribution box was cut

Overview

Turn off the power to the box at your breaker. Scrutinize Connection QualityA cut-out is a piece of electrical equipment that is located at the end of your power line. It is usually located next to your electricity meter and is the only piece of internal equipment that we're responsible for (the electricity meter itself belongs to the company you pay your electricity bills. The SEC or "Service Entry Cable" is the term used for the electrical cable that brings electrical power from the utility company's power drop at a utility pole or at an underground service system to the building and onwards to the building's electric meter. Make poor choices here, and you're potentially looking at: Electrical systems are like a. We have just started a rolling programme of inspections of cut out asset equipment (the incoming cable and fuse that supplies power to the property), and these inspections will be completed by door to door visits without any prior appointment. Then, reseal and resecure every connection inside of the box. The service entrance cable: The wire that extends from your insulator to the meter and from the meter to your circuit breaker box or fuse box.
