

What is the width of anti-corrosion cable trays in the Bahamas

AI Overview

Bahamas anti-corrosion cable trays are multi-layered, fiberglass-based systems designed for harsh environments, with spans from 2 to 12 meters and customizable layer configurations.

Overview Bahamas cable trays are anti-corrosion, flame-retardant, and layered corridor trays suitable for supporting multiple cables in corrosive environments. They are manufactured from fiberglass reinforced plastic (FRP), providing high resistance to rust and chemical degradation while maintaining structural strength and ease of installation.

Models and Layer Configurations

Layered Corridor Cable Trays: Can be configured with 2 to 6 layers, each layer supporting several cables. From the outside, they appear as a single layer, but internally they provide multiple cable channels.

Pedestrian Walkway Integration: Some models include a central walkway with cable support on both sides, enhancing accessibility and maintenance efficiency.

FRP Cable Tray Heights: Standard heights are 50 mm and 80 mm, with other heights available on request to accommodate different loading requirements.

Dimensions

Span Lengths: 2 to 12 meters, depending on support distance and site conditions.

Straight Sections: Widths available in 100, 150, 300, 450, 600, 750, 900, 1000, and 1200 mm, with lengths of 3000 mm and 6000 mm.

Fittings: Horizontal tees, crosses, vertical tees, and risers are available with standard radii of 300, 600, and 900 mm. Reducers and custom configurations can be supplied on request.

Advantages

High Load-Bearing Capacity: Supports multiple cables efficiently while reducing the need for extensive arm supports.

Ease of Installation and Maintenance: Side covers and modular design allow quick cable laying, replacement, and removal.

Corrosion Resistance: FRP construction ensures long-term durability in harsh chemical or marine environments.

Space Efficiency: M...
